Setting up PayPal Express:

You will want to open two tabs or browser windows on your computer.
In one login to your PayPal account and in the other login to your ShopSite store.

In PayPal, you may need to convert the account type to a business account if it isn't already. In the top right corner you should see a green circle with a profile in it next to your name. If you hover over it with your mouse you will have the option to click on Account Settings.

You should then see an option to 'Update' your API access.

This will take you to a page, scroll down until you see the Custom checkout experience and select the 'Manage API credentials' under NVP/SOAP API integration (Classic)

You will then have access to the Signature info by clicking on the 'Show' links you will then need to copy and paste the API Username, Password, and Signature from PayPal into ShopSite.

View or Remove API Signature

ℹ️ **Developers:** Do not share your credential information with anyone. Store in a secure location with limited access.

For preconfigured shopping carts: Copy and paste the API username, password, and signature into your shopping cart configuration or administration screen.

For building custom shopping carts: Store the following credential information in a secure location with limited access.
